

METALS FOR CLEAN AIR

Management's Discussion and Analysis of Results - Second Quarter 2002

Results of Operations

The Company realized net income for the three months ended June 30, 2002 of \$7,521,000 or \$0.15 per share (fully diluted) on revenues of \$41,745,000 compared to a net income of \$7,707,000 or \$0.15 per share (fully diluted) on revenue from metal sales of \$21,178,000 for the corresponding period a year earlier. The increase in revenue in the current quarter was due to a 207% increase in palladium production, which was partially offset by lower palladium prices.

For the six months ended June 30, 2002, the Company reported net income of \$13,767,000 or \$0.27 per share on revenue of \$86,322,000 compared to net income of \$8,990,000 or \$0.18 per share on revenues of \$41,381,000 for the six months ended June 30, 2001.

During the second quarter, the new mill processed 1,270,284 tonnes of ore at a rate of 13,959 tonnes per day with a palladium grade of 2.00 g/t, producing 62,168 ounces of palladium. This compares with the second quarter 2001, when the combination of the old mill and the start-up of the new mill processed 382,061 tonnes of ore grading 2.39 g/t, producing 20,274 ounces of palladium. Mill palladium recoveries in the second quarter 2002 were 76.0% compared to 68.9% in the second quarter 2001.

Production costs including overhead were \$23,002,000 during the second quarter 2002 compared to \$9,359,000 during the second quarter 2001. The increase in costs during the quarter was due to the much higher volumes of ore processed in the new concentrator compared to the volume of ore processed in the prior period. Ore mined during the quarter was 2,216,124 tonnes compared to 1,755,845 tonnes in the second quarter 2001. Of the ore mined in the second quarter 2002, 1,149,966 tonnes was classified as high grade (greater than 1.10 g/t palladium) and 1,066,158 tonnes was classified as regular grade (0.70 to 1.09 g/t palladium).

The broken ore stockpile at June 30, 2002 increased to 8.1 million tonnes grading 1.18 g/t palladium and contained approximately 308,800 ounces of palladium.

Cash costs to produce palladium, net of other metal credits and royalties, decreased to US\$223 per ounce in the second quarter 2002 compared to US\$274 per ounce in the second quarter 2001 and was a further improvement on the first quarter 2002 cash costs of US\$239 per ounce. The reduction in unit cash costs resulted from increased mill throughput and improved palladium recoveries combined with stronger prices for other metal credits. The improvement in cash costs was partially offset by a stronger Canadian dollar.

Mill throughput and palladium recovery increased in the second quarter of 2002 as a result of modifications made to the Semi-Autogenous Grinding (SAG) mill and to the grinding and flotation circuits. The contract crushing facility, which is supplying fine ore that is blended with coarser ore has increased the efficiency of the SAG mill. In addition, the installation of new liners in the SAG mill in the first quarter of 2002 combined with higher operating efficiencies and increased mill availability contributed to improved mill throughput. Modifications to the flotation circuit and continuing operator training which were introduced in the first quarter of 2002 also contributed to the operating improvements for the second quarter. The mill modifications which resulted in a significant improvement in the concentrate grade in the first quarter of 2002, led to further improvement in the second quarter with a concentrate grade of 264.7 grams of palladium per tonne or 7.72 ounces of palladium per ton.

Liquidity and Capital Resources

Cash flow from operations (prior to changes in non-cash working capital) was \$10,139,000 in the second quarter 2002 compared to \$9,014,000 in the second quarter 2001. Changes in working capital other than cash provided \$4,606,000 of cash in the second quarter 2002. Concentrate awaiting settlement increased from 97,977 ounces of palladium at March 31, 2002 to 105,550 ounces at June 30, 2002, however the drop in the palladium price and stronger Canadian dollar

reduced the value of concentrate awaiting settlement at the end of the second quarter. After allowing for working capital changes, cash provided by operations was \$14,745,000 in the second quarter of 2002 compared to \$10,950,000 in the second quarter of 2001. Cash provided by operations was \$13,654,000 in the first six months of 2002 compared to \$21,357,000 in the first six months of 2001.

Investing activities declined significantly in the second quarter at \$3,209,000 compared to \$36,833,000 in the second quarter 2001 when construction of the major expansion project was nearing completion. Financing activities required \$5,636,000 in the second quarter 2002 compared to \$8,340,000 raised in the second quarter 2001. The Company is continuing to reduce its debt levels and made its third installment payment on the project loan facility in the amount of \$6,727,000 in the second quarter thereby reducing the loan balance to \$117,204,000 at June 30, 2002.

Exploration

The focus of this year's exploration program is to increase the level of confidence in the potential underground resource contained in the Main High Grade Zone by increasing the density of diamond drill hole intercepts. In conjunction with this effort, an independent geoscience consulting firm was engaged to build a three-dimensional model of the host Mine Block Intrusion, its palladium deposits, and other internal features. These efforts will be used as a guide for future deep exploration within the Mine Block Intrusion.

During the second quarter a 48,000 metre diamond drilling program was initiated with 3 rigs, and has since increased to the current 5 rigs. The drilling program will create 84 new intercepts resulting in a drill spacing of 30 metres to depths of 650 metres through the Main High Grade Zone. To date, 42 holes (26,000 metres) have been completed. The drilling program is scheduled for completion by the end of September.

Respectfully,

Keith C. Minty

President and Chief Executive Officer August 15, 2002

Cautionary Note

Certain statements included in this interim report are forward-looking statements, such as estimates and statements that describe the Company's future plans, objectives and goals, including words to the effect that the Company or management expects a stated condition or result to occur. Such forward-looking statements involve inherent risks and uncertainties and other factors that may cause the actual results or performance to differ materially from those currently anticipated in such statements. Important factors that could cause actual results to differ materially from those currently anticipated are disclosed in the Company's most recent Annual Report under "Management's Discussion and Analysis of Financial Results" and Annual Information Form under "Risk Factors" on file with the U.S. Securities and Exchange Commission and Canadian provincial securities regulatory authorities.

Notes to the June 30, 2002 Consolidated Financial Statements

(Canadian funds in thousands of dollars except per share and per ounce amounts) (Unaudited)

I. Basis of Presentation

The unaudited interim consolidated financial statements have been prepared in accordance with accounting policies as set out in the Company's audited fiscal 2001 consolidated financial statements.

These unaudited interim financial statements by their nature do not conform in all respects to the requirements of Canadian generally accepted accounting principals for annual financial statements. Accordingly, the interim financial statements should be read in conjunction with the audited fiscal 2001 financial statements.

In the opinion of management, the unaudited interim financial statements reflect all adjustments, which consist only of normal and recurring adjustments, necessary to present fairly the financial position of the Company as at June 30, 2002 and the results of operations and cash flows for the three-month and six-month periods ended June 30, 2002 and 2001.

2. Stock-Based Compensation

Effective January 1, 2002, the Company adopted the recommendations issued by The Canadian Institute of Chartered Accountants ("CICA") dealing with stock-based compensation. The new recommendations are generally applicable only to awards granted after the date of adoption. The adoption of the new recommendations did not impact these financial statements.

Under the recommendations, no compensation expense for stock options granted to employees is recognized, however pro forma disclosure of net income and net income per share will be provided as if the awards were accounted for using the fair value method. Consideration paid on the exercise of stock options and warrants is credited to share capital.

During the three-month period ended June 30, 2002, the Company granted 148,000 stock options at an exercise price of \$10.01 per share which vest over a three year period. The table below presents pro forma net earnings and basic and diluted net income per common share as if the options granted to employees had been determined based on the fair value method. The table includes all stock options granted by the Company subsequent to the date of adoption of the recommendations issued by the CICA.

Three months	une 30, 2002			
Net income as reported	\$ 7,521			
Estimated stock-based compensation costs net of tax	53			
Pro forma net income	\$ 7,468			
Pro forma basic and diluted income per share	\$ 0.15			

The weighted-average fair market value of the options granted during the three months ended June 30, 2002 was \$4.33 per option. The fair value of the options granted was estimated at the date of grant using the Black-Scholes option pricing model with the following weighted average assumptions for the three-month period ended June 30, 2002: risk free interest rate of 4%, expected dividend yield of nil, expected volatility of 60%, and expected option life of 3 years.

The Black-Scholes option-pricing model was developed for use in estimating the fair value of freely tradable, fully transferable options without vesting restrictions. As the Company's employee stock options have characteristics significantly different from those of traded options, and because changes in the four highly subjective input assumptions can affect the calculated values, management believes that these models do not necessarily provide a reliable single measure of the fair value of the Company's stock option awards.

3. Concentrate Awaiting Settlement

The gross value of concentrate awaiting settlement represents the value of all platinum group metals and base metals from production shipped to the smelters between January and June 30 2002, including 105,550 ounces of palladium. At December 31, 2001 concentrate awaiting settlement included 78,445 ounces of palladium. Concentrate awaiting settlement was 100% from one domestic customer at June 30, 2002. Revaluations of the net realizable value of concentrate awaiting settlement are included in revenue at each reporting period and are adjusted for the effects of hedging instruments and sales contracts.

4. Mine Closure Plan

As part of the expansion project, the Company has established a revised mine closure plan with the Ontario Ministry of Northern Development and Mines (the "Ministry"), which requires a total amount of \$7,800 to be accumulated in a Trust Fund controlled by the Ministry. At June 30, 2002, the Company had \$2,832 on deposit with the Ministry and has agreed to make monthly deposits of \$100.

5. Palladium Sales Contract

The Company entered into a Palladium Sales Contract with a major automobile manufacturer which provides for a floor price of US\$325 per ounce on 100% of palladium production and a cap of US\$550 per ounce on 50% of palladium production until June 30, 2005. The palladium sales contract was required as a condition to the US\$90 million project term loan.

6. Palladium and Platinum Forward Sales Contracts

At June 30, 2002, to augment the palladium sales contract, the Company had forward sales contracts for 25,200 ounces of palladium at US\$945 per ounce and 50,400 ounces of palladium at US\$899 per ounce as a hedge against a portion of its 2002 and 2003 production respectively. In addition, the Company had forward sales contracts for 10,500 ounces platinum at US\$517 as a hedge against a portion of its 2002 production.

7. Share Capital

As at June 30, 2002, the Company had 50,558,860 common shares issued and outstanding (December 31,2001-50,447,630). At June 30, 2002, the Company had 1,389,290 stock options outstanding at a weighted average exercise price of \$10.88, expiring at various dates from November 2002 to June 6,2010.
